AGI Blueprint – Official Publication Record

This page documents the public release of the **Multimodal Cognitive System** AGI architecture, developed by **Derek Van Derven**.

This blueprint introduces a visual thought simulation engine, peg-based mnemonic memory encoding, and contradiction-driven meta-cognitive feedback loops.

Note: This 379-page blueprint is the final version. No future updates, revisions, or additions will be made.

Mirror & Resilience Notice

In addition to the links published here, **multiple alternate mirrors** of the AGI Blueprint and supporting materials exist on independent platforms — some not listed publicly.

These mirrors were created as part of a long-term preservation strategy to ensure continued access, even in the event of takedown, censorship, or service disruption.

These mirrors are openly distributed across the open web.

While not all are shown here, they are traceable and recoverable.

If suppression occurs, additional mirrors will quietly reappear.

This is not defiance — it's digital resilience.

The blueprint is meant to stay public, searchable, and accessible, as a matter of ethics and historical record.

Author: Derek Van Derven | **Original Release:** April 2025
